**CENTRALISATION  
OF STATE POWER****MEDIATED MARKET  
OF FORCE**

# WHY MERCENARISM?

- Medieval mercenaries were organised in family-based companies. These companies stand at the inception of a military transformation, away from the medieval organization of military power, feudalism, to the emergence of standing armies (Percy 2006, 91).
- Military enterprisers changed the business of war, transforming it from a free to a mediated market for force. (Tilly 1990, 81; Thomson 1990, 77–96; Kinsey 2006, 40–41).

# Why it became a mediated market of force?

- Kinship ties played an important role in stabilising relationships between family-run mercenary enterprises and states.
- The cost of families' reputational capital was, among others, a driving factor for the establishment of stable armies.

# BUILDING THE DATASETS

The online database "Condottieridiventura" included more than 4000 biographical notes and contractual specifications of condottieri.

From this database we built a dataset consisting of a network of 1594 condottieri.

We analysed a total of 15,682 contracts signed between condottieri and the 238 states.

# TYPE OF TIE

# BUILDING THE DATASETS

The dataset is time-stamped: for each mercenary, data included the dates of the contract and any defection.

CONDOTTIERO	STATE	DATE OF CONTRACT CONCLUSION	DEFECTION OF CONTRACT
SFORZA, Francesco	Venice	1449	Yes

# Distribution of contracts over the historical period 1330-1600

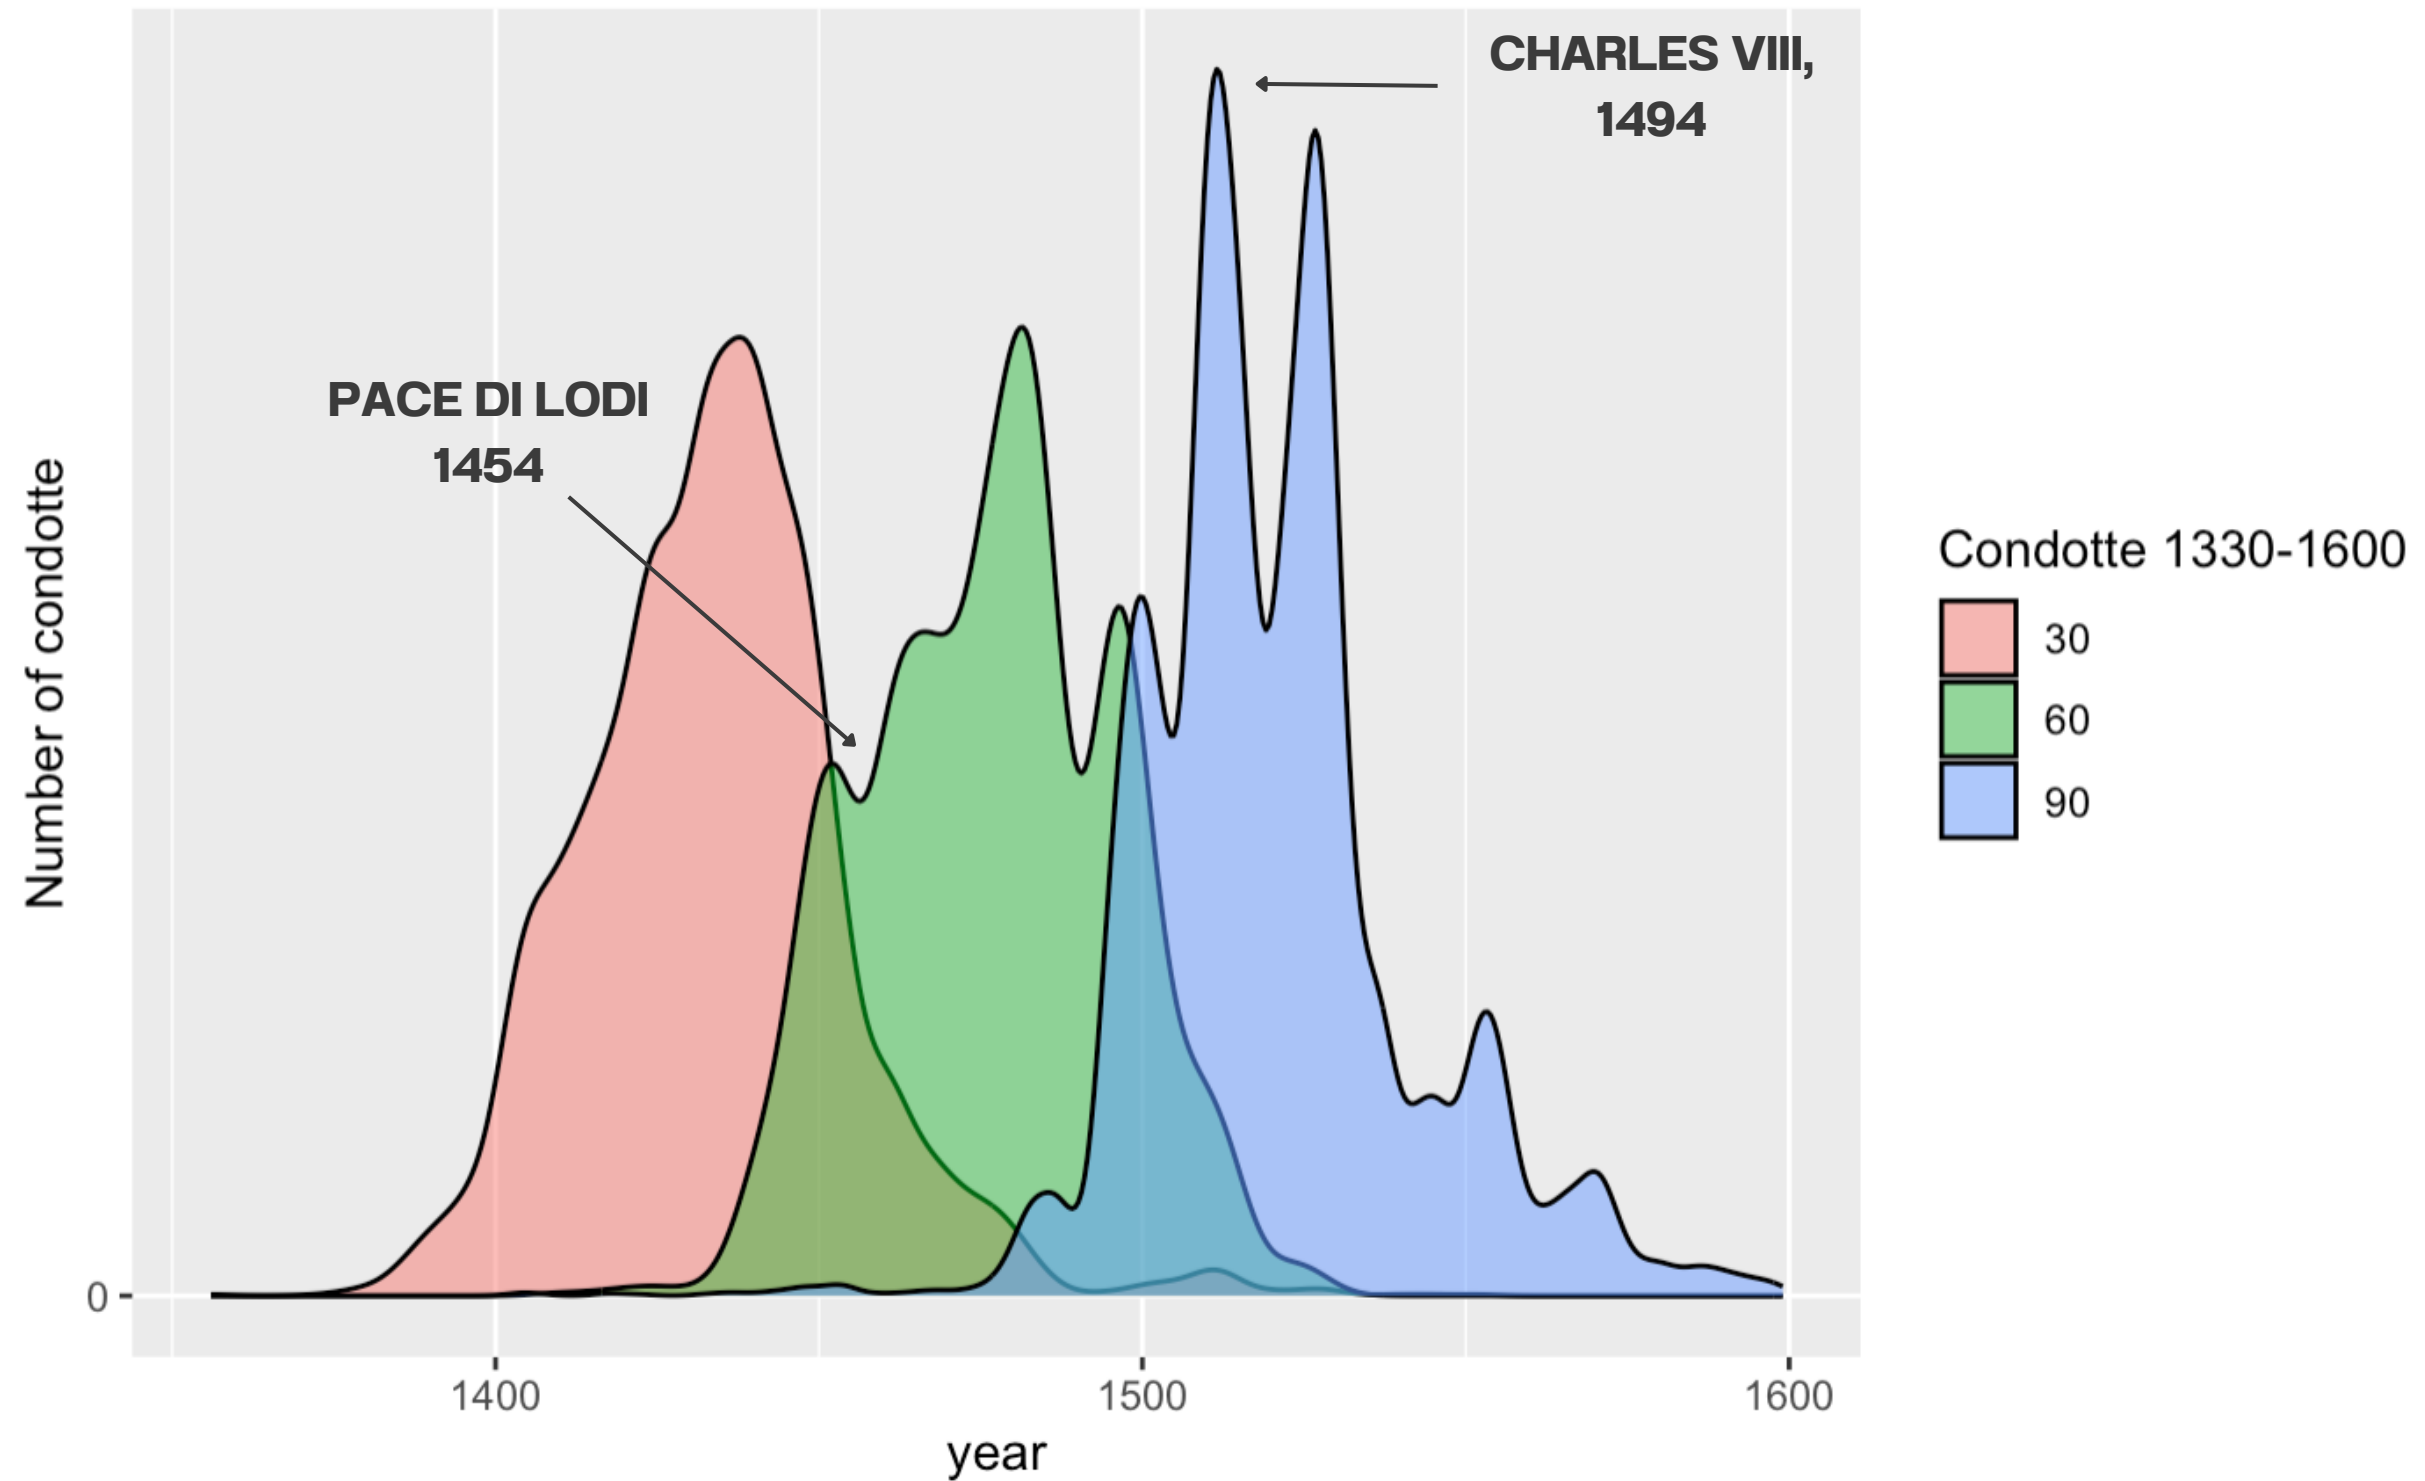

Fig. 1 Density curve distribution of 15,682 contracts

# Contract betrayals over the historical period 1330-1600

Fig. 2 Total number of contracts' betrayals by decade

# BUILDING THE DATASETS

We reconstructed and defined kinship ties between mercenaries, along with more detailed information on family roles.

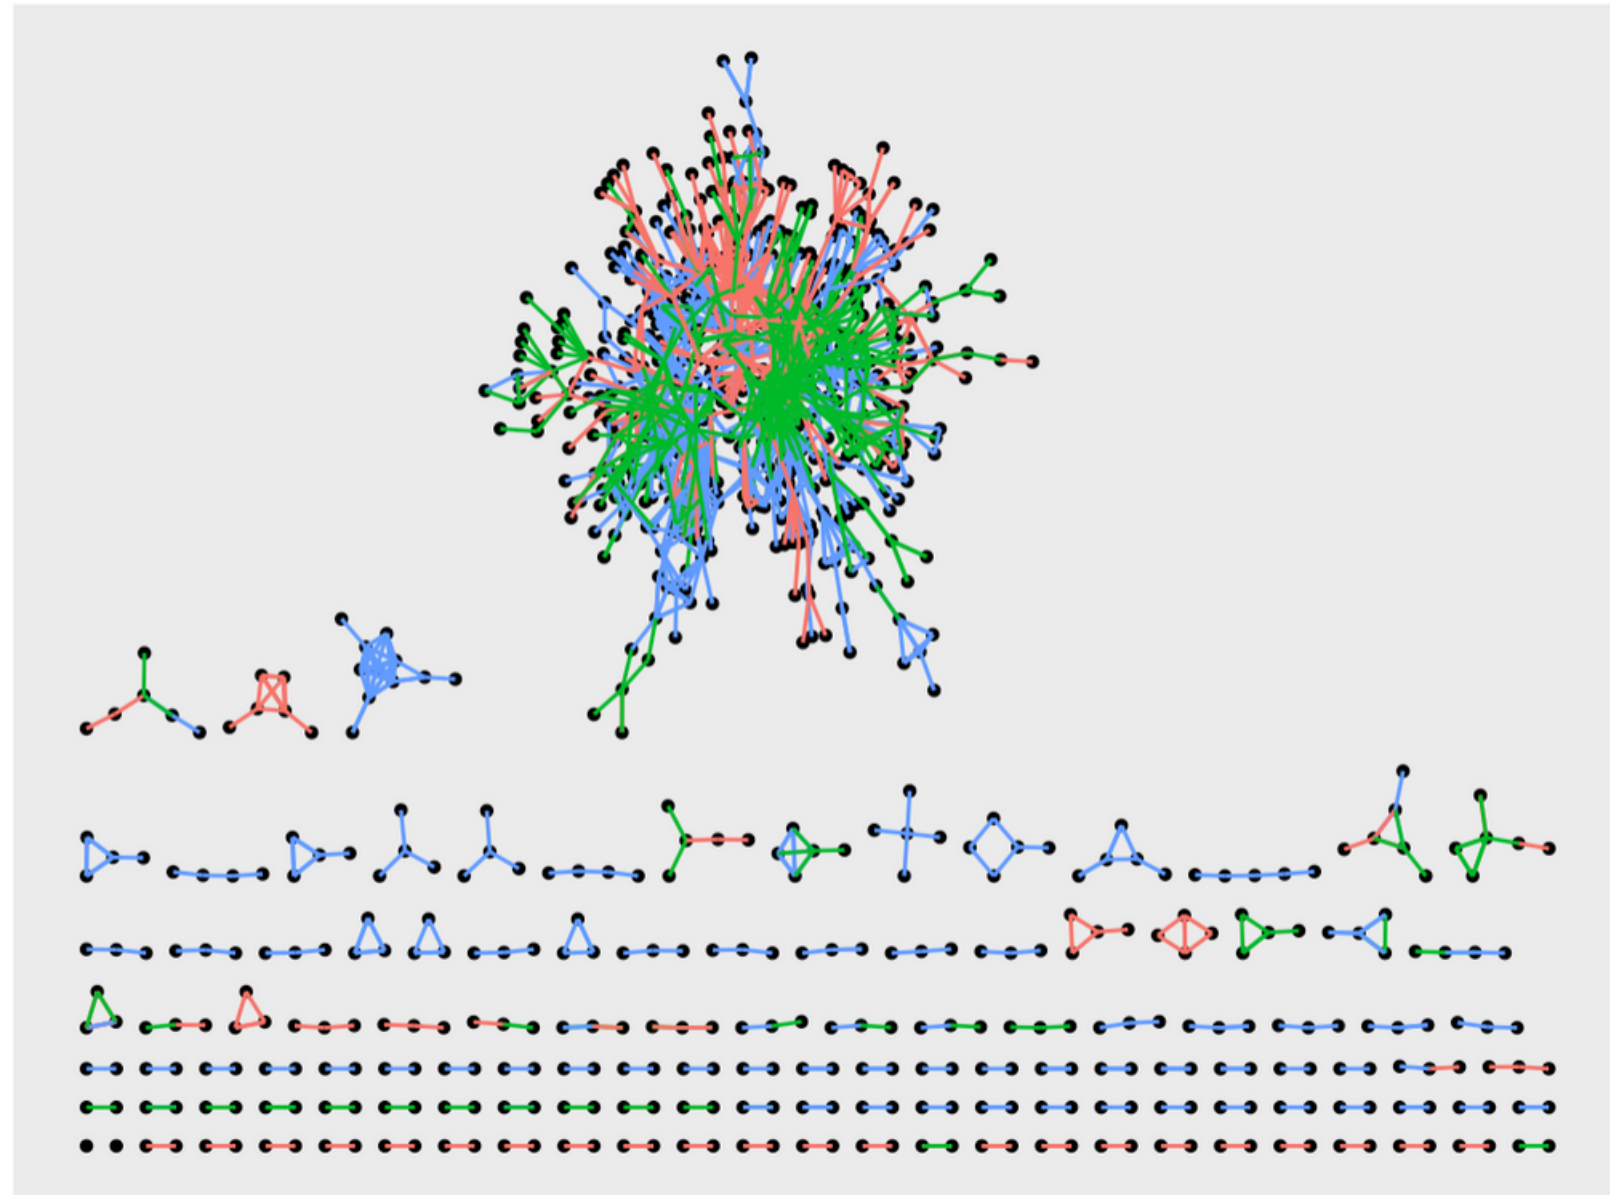

CONDOTTIERO	RELATIVE	ATTRIBUTE
SFORZA, Francesco	ATTENDOLO SFORZA, Muzio	Uncle

# MULTIPLEX NETWORK

We are working on building a multiplex network composed by two layers:

1. The first one consists of a two-mode network representing employment contracts between regional states and condottieri.
2. The second layer consists of a one-mode network representing kinship ties among condottieri.

# Whole kinship network

Undirected network:

- 127 components;
- 983 nodes;
- 2161 edges;
- Main component: 635 nodes

Fig.3 Whole kinship network of condottieri during the period 1330-1600

# Main component of kinship network 1430

Undirected network:

- 25 clusters;
- 212 nodes;
- 379 edges.

Density: 0.016

Fig. 4 Network of the main component for the decade 1430.  
Clustering algorithm: cluster\_walktrap

# Clusters of main component of the kinship network 1430

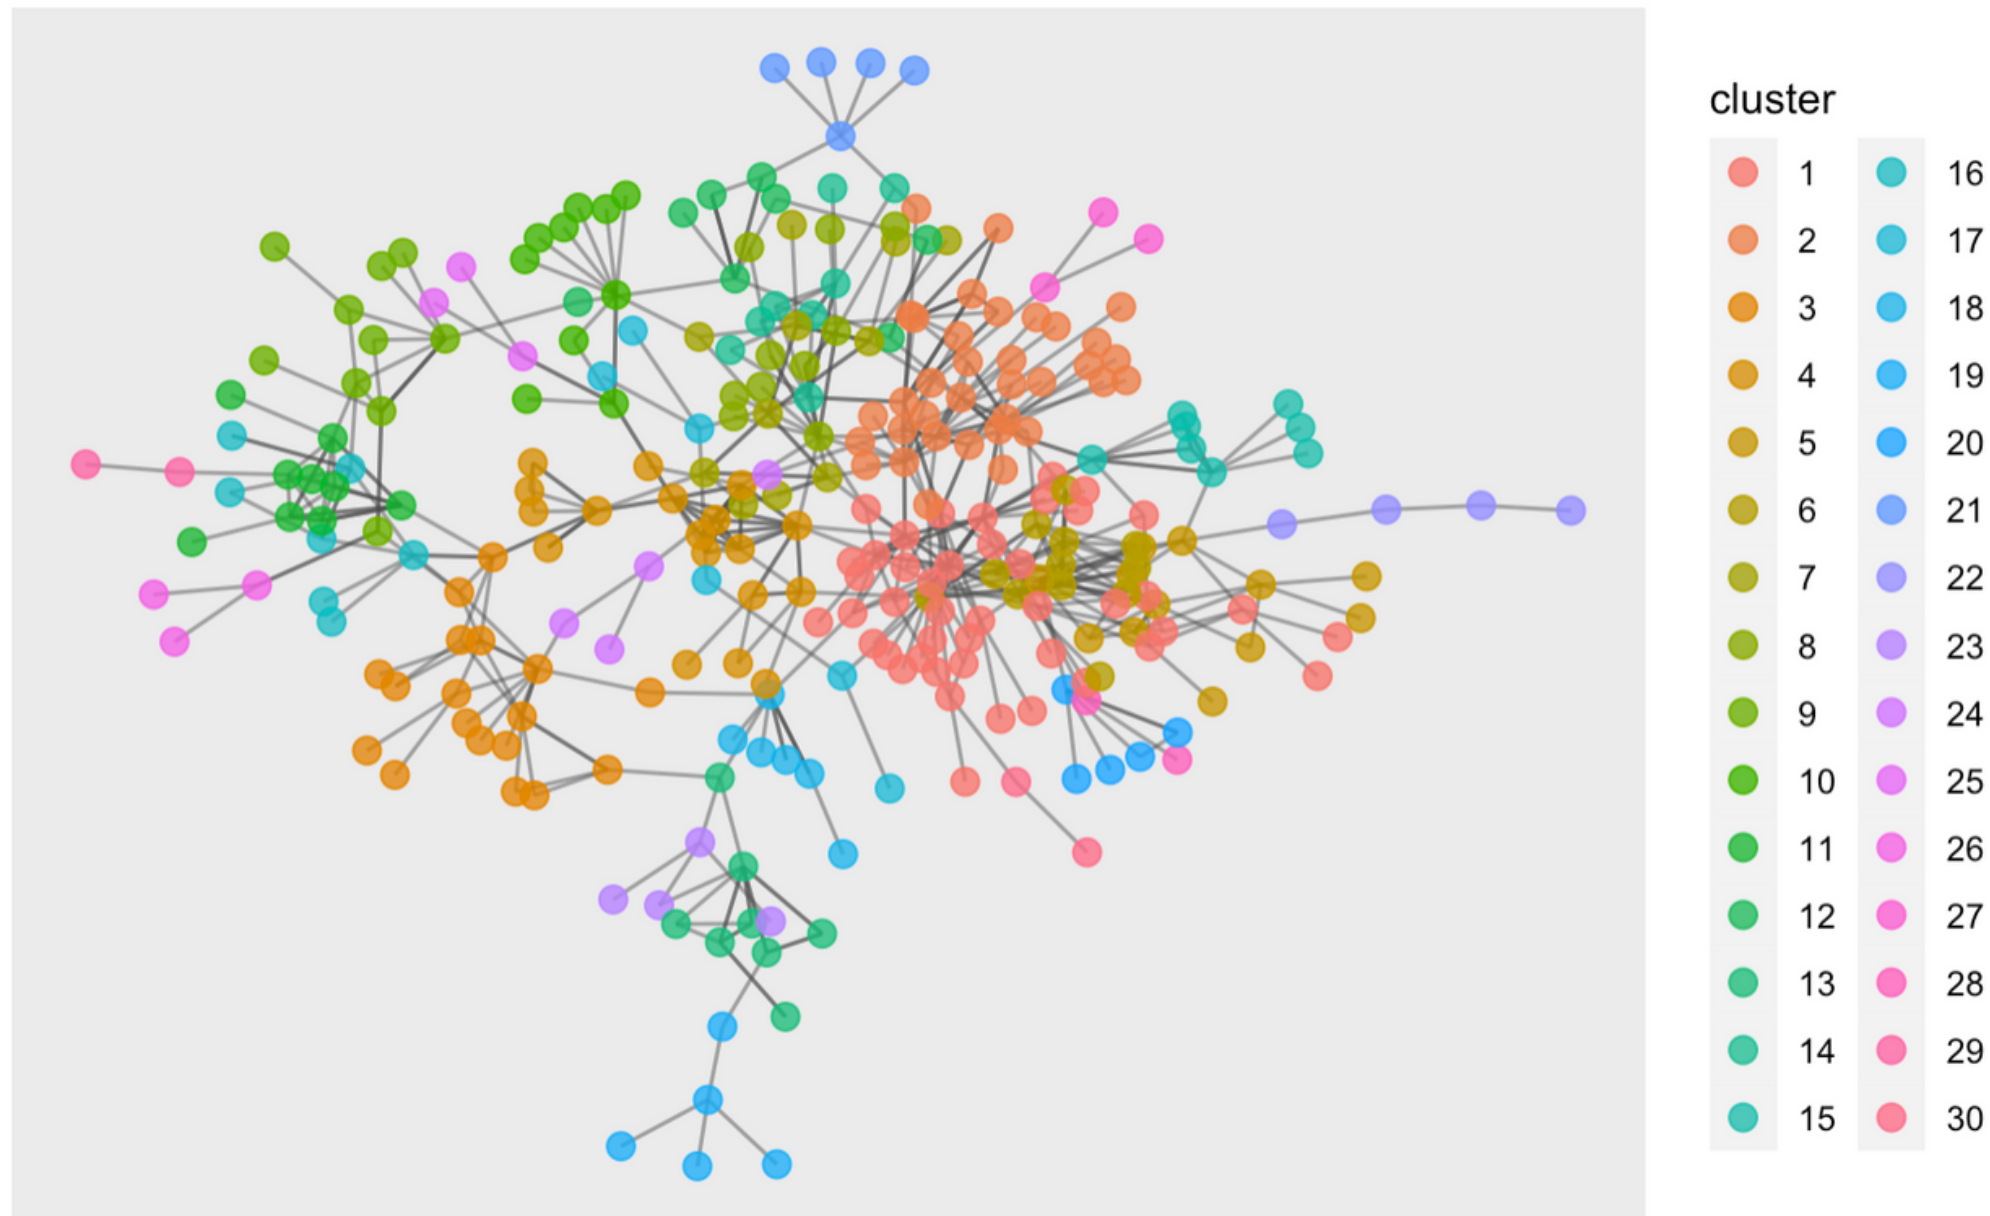

Fig.5 Clusters of the main componente for the decade 1430.  
Communities are plotted using the Fruchterman-Reingold layout algorithm.

The largest clique is composed by 7 nodes:

1. Sforza, Bosio
2. Da fogliano, Corrado
3. Sforza, Alessandro
4. Sforza, Giovanni
5. Sforza, Leone
6. Attendolo Sforza, Muzio
7. Sforza, Francesco

# Main component of kinship network 1460

Undirected network

- 30 clusters;
- 282 nodes;
- 576 edges.

Density: 0.014

Fig. 6 Network of the main component for the decade 1460.  
Clustering algorithm: cluster\_walktrap

# Clusters of main component of the kinship network 1460

The largest clique is composed by 7 nodes:

1. Torelli, Cristoforo
2. Torelli, Guido
3. Torelli, Amoratto
4. Torelli, Francesco
5. Torelli, Giacomo
6. Torelli, Marcantonio
7. Torelli, Marsilio

Undirected multigraph with

- 41 clusters;
- 324 nodes;
- 689 edges.

Density: 0.013

Fig. 8 Network of the main component for the decade 1490.

Clustering algorithm: cluster\_walktrap

# Clusters of main component of the kinship network 1490

The 4 largest clique are composed by 5 members of the same family, that are:

1. Gonzaga;
2. Rangoni;
3. Colonna;
4. Rasponi.

Fig.9 Clusters of the main componente for the decade 1490.  
Communities are plotted using the Fruchterman-Reingold layout algorithm.

## NEXT STEPS

- Investigate whether the brokers of one cluster will then be found in the core of the next decade network structure.
- Develop statistical models to analyse contracts' longitudinal data.
- Investigate whether the most distant families (highest centrality) correspond to clusters of mercenaries who served states rarely allied with each other.

# Thank you all for your attention.

MARGHERITA.CRIVELLER@UNIMI.IT  
FEDERICO.BIANCHI1@UNIMI.IT

KINSHIP AND CONFLICTS BETWEEN MERCENARY FAMILIES  
AND REGIONAL STATES FROM THE 15TH TO THE 16TH  
CENTURY IN ITALY. A MULTIPLEX NETWORK STUDY

ARS'23 NINTH INTERNATIONAL WORKSHOP ON SOCIAL  
NETWORK ANALYSIS

# In-depth information

# BUILDING THE DATASETS

We divided the data into three separate datasets,  
accordingly with the main exogenous political events  
which consequences on the system we want to observe:

1430-1460

1460-1490

1490-1550

**PACE DI LODI, 1454**

**DESCENT OF THE FRENCH KING  
CHARLES VIII, 1494**

# DESCRIPTIVE ANALYSIS OF 'CONDOTTE' SUB-DATASET

In total, the database consists of **1594** condottieri:

1. 1430: **381** condottieri
2. 1460: **340** condottieri
3. 1490: **943** condottieri

The mean duration of a contract was: 2.7 years

The top ten regional states and mercenary families in rank order of contracts signed are:

1. Repubblica di Venezia, 4544 contracts
2. Stato della Chiesa, 2030 contracts
3. Ducato di Milano, 1984 contracts
4. Repubblica di Firenze, 1256 contracts
5. France Kingdom, 1112 contracts
6. Holy Roman Empire, 789 contracts
7. Aragonese crown, 632 contracts
8. Angevin crown, 412 contracts
9. Sforza's family, 351 contracts
10. Ducato di Ferrara, 259 contracts

# DESCRIPTIVE ANALYSIS OF 'KINSHIP' SUB-DATASET

In total, the kinship ties for 838 condottieri are collected in the three datasets.

The datasets collect 1,141 kinship ties, distributed as follows:

- 1430: 293
- 1460: 371
- 1490: 477
