Dark energy, our faster universe and its breaker' galaxies

Tuesday, 30 May 2023 12:15 (40)

We shall review the landscape of dark energy models, focusing on non-minimal cosmologies which exhibit a coupling among the dark sectors of the theory, that is, an energy flow among dark energy and dark matter. Such a very appealing possibility may alleviate the current mismatch in the observations of the Hubble constant. It could also play a non-negligible role in the recent results of the JWST-telescope
