

The evolutionary path of astronomers who study galaxy evolution

To some extent, the evolution of galaxies shows many similarities with the life of researchers. They are not smooth and linear processes as one might imagine.

In this chat I am going to talk about galaxy evolution in dense environments and the different techniques and equipment used. As an example, I will mention how we use Virtual Reality (a tool developed for gaming) to visualize and analyze galaxy evolution. Moving from theoretical physics to astronomy and astrophysics, jumping from one country to another: the life of a researcher.
